

THE FULL DETAILS

Everything behind the pitch — for when you want to dig in.

The numbers, the plays we run, the whole toolbox, and exactly what it costs. No need to read it all — just book the free call and we'll walk you through what matters for you.

42%

of US restaurants didn't turn a profit last year (*National Restaurant Association*).

~3%

what it costs to take an order on your own site — versus up to 30% the delivery apps keep.

5–9%

more revenue for an independent with each one-star rating bump (*Harvard Business School*).

28%

only 28% of operators say tech ever improved their profit — we're built to be the exception (*National Restaurant Association*).

HOW WE'D GROW YOUR RESTAURANT

Use what works. Fix what leaks. Own what's yours.

We don't fight the apps or rip out what's working — we use them smarter. Tell us what you run, and we'll show you exactly where we'd start:

WHICH SOUNDS LIKE YOU?

Takeout or counter

Sit-down restaurant

2-10 locations

For a single neighborhood spot, the fastest money is defensive: turn the customers the apps bring you into your own repeat orders, get every call answered, and end the

tablet chaos — wins you feel within weeks. **Start with the three marked below.**

START HERE

Treat the apps as discovery — then win the customer

The apps are great at getting you *found*. The mistake is letting them keep the guest. We capture the customers they send you and turn them into direct, repeat orders on your own site — you keep the relationship and the margin. (Still want to deliver? White-label drivers, ~\$8 flat.)

FIT IF the apps bring orders but you never see the customer again.

MAYBE NOT if you do little delivery or takeout.

START HERE

Answer every call, around the clock

An AI voice agent takes orders and books tables 24/7, so no rush ever sends money to voicemail.

FIT IF you lose takeout or reservation calls during peaks.

MAYBE NOT if your call volume is genuinely low.

START HERE

End the tablet chaos

All your delivery apps flowing into one screen and into your POS — instead of three tablets beeping at the counter and orders re-keyed by hand.

FIT IF you're juggling DoorDash, Uber & Grubhub tablets.

MAYBE NOT if the apps already feed your POS.

These are the high-impact plays — but there are **100+ tools** out there, and most owners don't know which (if any) fit them. [See what fits your restaurant →](#)

WHAT'S OUT THERE — AND WHAT FITS YOU

There's a tool for everything. You only need the right few.

We track **100+ restaurant tools across 22 categories** — and most owners have never heard of the handful that would actually move their numbers. Tap the [highlighted words](#) to describe your place, and we'll show you what likely fits, what it tends to cost, and what to skip — then send the full breakdown and set up your free call.

WHAT IT COSTS

No leap of faith. You see the numbers first.

Whether you need a one-time fix or an ongoing team, we scope it to your restaurant — and you never spend a dollar on faith.

You see the numbers first

Before anything starts, you get the plan, the cost, and the expected return in plain dollars. If the math doesn't work for you, we don't move.

You pay only after you benefit

Setup is a clear one-time fee. For strategy work we get paid only once the savings show up in your real numbers — tracked month over month from your POS and the apps. Month to month, no lock-in.

No vendor commissions, ever

If we connect you to a service, our fee comes from you — never a kickback from the vendor. So the only thing we ever recommend is what's right for your restaurant.

Ready when you are. [Book your free call →](#)

GOOD QUESTIONS

What owners ask us first.

Is this just one person?

+

What happens on the free call?

+

Do you disappear after it's built?

+

Can't I just do this myself?
